

REAL Peace of Mind whoever you are...

"Sometimes my husband and I both work late. It's reassuring to know that our system can send a message to our pager, letting us know that our daughter is home safe from school, and has disarmed the system."

"I'm a big fan of the emergency feature that can link your home's smoke alarms into a 24 hour monitoring station. Every second counts in an emergency, and it's the fastest way to get us there to help."

"I'm a single mom, so when I have to be away from home it is reassuring to have a system that my babysitter can use easily. It's so simple and straightforward, it made us all feel safer."

"My cleaning lady has her own entry code, so I can tell when she's been at the house. With the remote service feature, her entry code can also be changed or cancelled at the monitoring station, without the need for a service call."

"The simplicity of the keypad makes the PowerSeries easy to use. So when I'm running out the door, a quick glance at the status lights on the keypad assures me that my office is secure."

"Our company was growing quickly and we needed a system that could expand when we did. The PowerSeries security system we chose made real sense. Its hybrid technology lets us expand to 32 points of protection."

Real Security For The Real World

DSC
PowerSeries™
SECURITY SYSTEMS

The State-of-The-Art PowerSeries Security Systems

Real peace of mind begins with knowing your new security system was built by DSC to the highest quality standards in the security industry. Based on leading-edge technology, the PowerSeries makes it possible for your system installer to offer you a truly superior, fully customized system - either a traditional hardwired system or a hybrid (hardwired/wireless) system - with the widest range of innovative features and convenient options.

Remote Service

The powerful upload/download capability built into your system means that programming changes such as adding entry codes and setting alarm delay times can be communicated over a standard telephone line. As well, many equipment problems can be diagnosed and corrected over the phone by your installer - eliminating inconvenient and expensive service calls.

In addition, these powerful security systems offer the highest level of alarm communications, including personal paging if you wish. They also incorporate over a dozen sophisticated false alarm prevention features, making them the most reliable systems on the market today.

Remote Control at Your Finger Tips

Be in control, wherever you are. Optional remote control devices include a wireless key for arming and disarming the system.

Smoke & Heat Detector Monitoring

Meets the threat of fire head-on, providing direct connections from your smoke detectors and heat detectors to your monitoring station.

So even if you're away, your monitoring station can still alert the fire department should a fire emergency occur.

False Alarm Prevention

DSC is the industry leader in the prevention of false alarms. So you shouldn't be surprised that your PowerSeries system has over a dozen false alarm prevention features built into it, setting a standard of reliability that goes far beyond other systems.

Handy Keep-In-Touch Feature

Your system can be programmed to alert you (or anyone else you choose) when certain events occur. For example, it can call you at work on your personal pager to let you know when a child leaves or returns home.

Wireless Options

Both hardwired and wireless detection devices can be used with your PowerSeries system, permitting fast, easy expansion to exactly suit your needs for today and tomorrow.

• PC1555RKZ - 8 zone LED keypad

Immediate Response Emergency Keys

Summoning help is lightning quick. Simply pressing the appropriate emergency key for 2 seconds sends an alarm signal to your central monitoring station, who will immediately alert the proper authority - police, fire, or emergency services.

Panel Options:

• Power432 - 4-32 Zone control panel

• Power632 - 6-32 Zone control panel

Keypad options:

• PC5508Z - 8 Zone LED keypad

• PC5501Z - Fixed message LCD keypad

• LCD5500Z - Programmable message LCD keypad
